DESCRIPTION

Solar LED is a recessed light fitting producing a soft, high-output light. High efficiency and light quality are achieved by an innovative optical system based on the principles of a lighthouse. The 'lighthouse' optic directs all LED luminous flux to a bespoke, highly-reflective surface. The light is then redirected on to the luminaire body, which is finished in a highly-efficient diffusing paint. The result is a diffused, comfortable, soft light emission, with a highly efficient performance.
