Technical description

Central body in extruded aluminum, end cap in die-cast aluminum. Optics made with constant pitch between the lenses to offer a homogeneous luminous flux even in case of multiple lamps installed in a continuous line. High resistance external coating applied with a double layer of epoxy powders in accordance with the QUALICOAT standard. The first layer of epoxy powder gives chemical and mechanical resistance, the second finishing layer of polyester powder ensures resistance to UV rays and atmospheric agents. The painted surfaces are treated with alkaline and acidic washes, then rinsed with demineralized water, subjected to a chemical conversion treatment to protect against oxidation. Diffuser in extra clear transparent glass, screen-printed and glued to ensure a watertight seal. The installation of the product requires use of steel brackets, to be ordered separately. Luminaire provided with a length of approximately 1500 mm of outgoing neoprene cable on one side. On request it is possible to provide luminaires with loop-through connection for multiple installation with continuity of line.
