

BIRCH

16.40

Design by Omer Arbel
PRODUCT SPECIFICATION

approx 297kg (655lb)

- PENDANTS: forty
- MOUNTING: 250mm (10") diameter base plate
- LAMPING: 1.5w LED (60w total draw)
- DIMMING: not dimmable
- MATERIALS: poured glass, electrical components, bead blasted stainless steel armature components
- WEIGHT: approximately 297kg (655lb)
- TRANSFORMERS: remote

DESCRIPTION

The 16.40 is a tree-like 16 installation using forty pendants and a modular stainless steel armature system mounted to a seven tube stainless steel 'birch' base. These trees are designed to be grouped into forest-like assemblies of a variety of different sizes and types, but are strong compositional elements on their own. Installation of these trees is complex and Bocci recommends a structural consultant to assess the viability of the system in the context in which it is to be installed. Installation requires anchoring into either an existing structural slab or a newly built foundation to meet the specifications of the design drawings, including appropriate drainage if exposed to water and remotely mounted LED drivers.

16 is formed by sequentially pouring three separate layers of coloured, molten glass – in varying opacities – on a horizontal plane. Each layer responds to the indeterminate shape of the previous pour to create a uniquely layered whole. Two of these pieces are then attached and illuminated with an internal LED lamp. The finished 16 is visually complex: each separate colour layer is visible through the other layers, with light reflecting along the edges.

All trees are rated for outdoor (or indoor) use based on structural analysis for moderately sheltered locations near seawater with minimal snow loads. Any other application restraints may need further engineering.

NOTES

- + Purchase replacement lamps online at www.bocci.ca/lamps
- + Available in a wet location configuration.
- + Transformers must be mounted remotely in an easily accessible and hidden location for ease of long-term maintenance.

US patent # D754,911
EU patent #002672774 - 0001 to 0012

1

With the anchors in place, spin two of the provided nuts followed by a washer onto each anchor. Ensuring a minimum of 100mm (4") from top of leveling nuts to ground, use a level and level off 4 sets of nuts (hardware not provided).

2

Place washer on each anchor.
Lift off the cover.

Using heavy equipment (if necessary), lower the tree base onto the anchor keeping the pull wire free for the following steps. Repeat this step for all nearby trees.

3

Orient the tree base in the direction you want the branches to go.

Once all tree bases are in place, put another washer on each anchor followed by a nut and tighten the nuts until snug.

Note: Make sure that the area under the base is kept clear and the pull wire does not get damaged during install.

Do not in-fill this area under the base. Wires must be kept free, even after final install.

4

Once all wiring connections are complete, and the nuts are snug-tight, slide the cover cap down over the plate until it rests on either the gussets or the ground.

Note: Bocci recommends installing the finish floor height higher than the cover cap with a small reveal around the tree base or alternately installing flush with the cover plate.

Depending on the final installation aesthetic, you may want to finish the floor at this point if the finished floor can support a lift or scaffold for installation of the pendants. If not, complete steps 6-8 before finishing the mount detail.

5

You should now have an upright tree base ready for composition of the pendants according to the specification sheet.

6

Matching the branch number with the tree tube number, secure the burial cable of each branch to the end of the pull wire with tape or other temporary means.

Ensure burial cable still fits freely through the tree tube.

Turn power to fixture on.

Note: Test each branch to ensure all LEDs light before attaching to tree.

7

After each branch is installed, feed pull wire through pre-laid conduit to the driver (power supply) location.

Connect burial cables to drivers (power supplies), ensuring to leave 100-155mm (4'-6") of loose excess burial cable.

Check that each lamp is working properly as you go along.

8

Orient branches as desired, ensuring there is no interference with adjacent branches, pendants or trees.

Tighten set screws to secure the branch.

9

Remove the metal tube at the end of each branch by unscrewing the set screw.

Slide the pendant onto the branch, orient as desired, and secure using an M4 set screw (provided).

Note: If the fixture sags or seems unbalanced you may be overloading the base. Remove pendants, or shorten cantilever as required.

10

Clean fingerprints from pendants.
